

MARCOS SANTOS

CYBER SECURITY

A LITTLE ABOUT MYSELF

I am a systems analyst and programmer from São Bernardo do Campo, Brazil.

I have always focused on information security and currently study Cyber Security programming.

One of my differentials is that I like to pass on information and teach those who are entering in the area of Technology as I went through several functions over time in which I learned about infrastructure, software development, and currently I found myself in Cyber Security.

I support other developers make their codes more secure, while also creating softwares to help me in my routines, thus increasing my productivity. I also create softwares and commercial sites on my spare time.

SKILLS

- Effective motivator
- Excellent customer relationship management
- Curious
- Agile and effective
- Full Stack
- Security-focused developer
- Disseminator of the culture of safe development
- Team work
- New technologies
